Add spark "local" mode support for Databricks Connect

Currently, developing libraries we forced to use vanilla Spark dependency, for example, to write and run unit test. It is quicker, rather than spinning a cluster, installing some third-party dependencies, etc. So, would it be possible to work with...

Display Feature description in Feature Store

One can comment/describe features/columns in Feature Store. However, one can not see it on Feature Store UI.

Custom location to save Ganglia logs

Currently we have to copy Ganglia logs from /var/lib/ganglia/rrds/cluster/ in the end of a notebook execution before job-cluster termination. We need these logs to later analyze cluster nodes usage in convenient tool such as Grafana. Could add a...

Add tree-view mode for workspace folders panel

It would be great to have tree-view mode working on notebooks and other files/content in Databricks editor like it is done in popular IDEs like PyCharm, or VSCode, or JupyterLab

Attach an experiment to a notebook when there are Runs created by that notebook

Currently, one can see an attached to a notebook MLFlow Experiment only when the Experiment name equal to the notebook path. Could we attach possibly any number of experiments to the notebook when there are Runs created by that notebook. That will...

Add possibility to execute some code on cluster termination event

There is a possibility to execute some code on cluster nodes initialisation event. Could we do something similar on nodes termination event? For example, it can be useful to copy node logs and prevent them from lost.

Always display library version in the list of installed libraries

Currently, one can not understand which version of a library (installed via PyPi) is installed, if no version were provided. Please make Databricks display the version.

Databricks-Connect: inherit cluster settings for SparkSession creation

If it's possible, please make databricks-connect be able to use existing cluster properties as a default values to create a spark session. For example, currently we have to set timezone explicitly, doing `SparkSession.builder.config("spark.sql.ses...`

Unify Databricks notebooks versioning system with the one Git has

For the moment Databricks supports Git integration to some extent. Besides an ability to work with all sorts of text files it's great to have a unified approach of versioning files inside Databricks workspace mapped onto a Git repository. It's gre...

Highlight links, JIRA tickets, etc. which is in a table/column descriptions

I'm just wondering what if to improve a table details page (that one can see navigating Data->Catalogs->Databases->Tables) that one very often refers to inside DBX, like this one below. Improve in a way to highlight links, JIRA tickets, e...
